

Continuing Education

Health technology solutions

Product development and commercialization

Why participate

When health technology products are developed and commercialized, the requirements, standards and regulations in different markets like USA, EU, China and Japan need to be considered – from research and development phase to marketing and after sales services. If you are or will be part of any kind of company in biomedical or health technology field, you will benefit greatly from this study module.

This study module gives you extensive and comprehensive knowledge how to design, manufacture and place on the market health technology products to the global healthcare market, as well as related regulations, requirements and standards.

Contents

The study module is compiled of 4 courses which all can be taken also separately. The module includes 2 compulsory courses and 2 optional courses of which you may choose at least 1. Each course is worth 5 ECTS. To complete the study module, you must finalize at least 3 courses (15 ECTS).

- Introduction to quality and regulation for medical product development, 5 ECTS
- Regulatory requirements for design and manufacture of medical devices, 5 ECTS
- Standards, interoperability and regulation in health informatics, 5 ECTS
- Product development of biomedical devices, 5 ECTS

Organisation

Tampere University

Location

Tampere

Schedule
